Work Experience

ChatDaddy *Remote*

Full-Stack Developer *08/2025 - Present*

- Architected and published **ChatDaddy's 60+ tool MCP platform**, turning Claude, Codex, Cursor, and VS Code into secure operational interfaces for multichannel messaging, campaigns, bots, CRM, channel recovery, billing, and team admin.
- Launched **WebChat as a first-class messaging channel**, enabling businesses to embed secure, real-time customer support on any website through managed sessions, SSE delivery, message history, key rotation, and cross-service events.
- Built a **hot/cold data partitioning layer** with transparent data-access transformations across **MongoDB and cold storage**, powered by **Elasticsearch** search, maintaining double-digit millisecond response times at all times.
- Architected and shipped **ChatDaddy's WhatsApp Business commerce** and identity layer, unifying BSUID, username, and enabling native catalog sync, product messaging, profile management, and guarded BSP migrations.
- Developed and shipped **AI-powered analytics and automation** features, including an **AI prompt-to-flow generator** that converts plain-language descriptions into workflows, and AI-generated daily reports with automation suggestions.
- Root-caused a production **Postgres disk-full outage** (orphaned replication slot pinning 200GB+ of WAL) and built an internal **observability suite** that surfaced **257 error patterns across 22 microservices**.
- Improved platform performance and reliability, cutting **contact latency 5×, eliminating 290K+ API calls/day**, and reducing decryption failures from **65% to <1% across 200K+ daily messages**.

CineStox *Remote*

Software Development Engineer 1 *07/2024 - 06/2025*

- Implemented a **Node.js Order Book microservice** with **Kafka and Socket.io**, handling **10K ops/sec at sub-50ms latency** (authoring its complete **LLD**, data models, APIs, and fault-handling), and integrated **Redis** across services for distributed caching, reducing database load by **40%**.
- Integrated **SabPaisa and Cashfree** payment gateways with event-driven reconciliation, reducing payment failures by **30%**; optimised **Sequelize-backed PostgreSQL** schemas with composite indexes and read-replica routing (**3× query performance**), maintaining **99.9% uptime** via CI pipelines.

Projects

PrepTime - Demo | GitHub

- Built an **AI-powered mock-interview platform** with **Vapi voice agents** for real-time voice interviews, using **Gemini via the Vercel AI SDK** to generate role-specific questions and structured, category-based feedback, with **Firebase** auth and interview persistence.
- **Tech-stack:** Next.js, React.js, TypeScript, Vapi AI, Google Gemini, Vercel, Firebase, Tailwind CSS, shadcn/ui.

AutoGitAI Web App - Demo | GitHub

- Built an **AI-powered GitHub repository analysis** platform using **Gemini** for repository summarization and **context-aware source-code search** via **LLM-based embeddings**, with **Assembly AI** meeting transcription stored in **Firebase**.
- **Tech-stack:** Next.js, TypeScript, Gemini AI, Assembly AI, Tailwind CSS, PostgreSQL, Firebase, Clerk, Render.

Skills

Languages	JavaScript · TypeScript · Java · Python · Golang
Frontend	React.js · Next.js · Material UI · Tailwind CSS · shadcn/ui
Backend & APIs	Node.js · Express.js · Socket.io · MCP · SSE · OpenAPI/Swagger
Databases & Events	PostgreSQL · MongoDB · MySQL · ElasticSearch · Redis · AMQP/RabbitMQ · Apache Kafka
Cloud & Tooling	GitHub · Docker · AWS Amplify · AWS EKS · CI/CD · Vercel · Render · Kibana · Jest
Other	Event-Driven Architecture · System Design (HLD/LLD) · Microservices · API Design · Real-time Systems

Education

Swami Keshvanand Institute of Technology *Jaipur, India*

Bachelor of Technology in Computer Science and Engineering (Artificial Intelligence); **CGPA: 8.90/10.00** *Oct 2020 - June 2024*
